

Veeam Agent for Microsoft Windows FREE

Simple, FREE backup for Windows – anywhere!

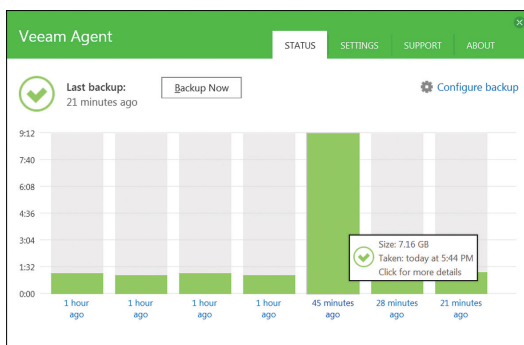

Veeam® Agent for Microsoft Windows FREE provides a simple solution for backing up Windows-based servers, desktops and laptops. With Veeam Agent for Microsoft Windows FREE, you can easily back up your PC to an external hard drive, NAS (network-attached storage) share or a Veeam Backup & Replication™ repository. And, if your system crashes, a hard drive fails or a file gets corrupted or accidentally deleted, you can recover what you need in minutes – like it never even happened.

Fast, hassle-free backups

Veeam Agent for Microsoft Windows FREE is a simple yet effective solution for scheduling automatic backups of your entire system or the specific volumes and folders of your choosing. Or, if the need should arise, you can run standalone full backups as well.

After an initial full backup has completed, Veeam Agent for Microsoft Windows FREE performs incremental backups – copying only new or changed data blocks since the last backup cycle. This, combined with built-in compression and deduplication, means your backups will be fast and use as little storage as possible.

Veeam Agent for Microsoft Windows FREE also helps optimize backup performance through:

- **Backup throttling:** Reduces the priority of the backup job process if the PC is busy with other tasks
- **File-selective, image-level processing:** Exclude individual files and folders during a backup to reduce the amount of data that needs to be transferred and stored
- **And more!**

Veeam Agent for Microsoft Windows FREE is the next evolution of Veeam Endpoint Backup™ FREE and remains a simple standalone agent that delivers backup and recovery for Windows servers and workstations, whether they're on premises, remote or in the public cloud.

What's new in version 2.1

Veeam Agent for Microsoft Windows FREE delivers all-new functionality to give you features and capabilities unheard of in a FREE Windows backup and recovery solution.

Version 2.1 includes:

- **Active full backups:** Mitigate risk and ensure backup chain continuity by scheduling periodic active full backups.
- **Veeam Restore to Microsoft Azure:** Restore or migrate on-premises, Windows-based physical server and endpoint backups directly into Microsoft Azure.
- **Instant recovery to Microsoft Hyper-V VM:** Quickly restore service to users by starting a VM directly from an agent backup file.
- **Off-site backup to Microsoft OneDrive[®]:** Back up directly to Microsoft OneDrive, providing easy access to secure cloud-based storage for your Windows-based workstation and server workloads.
- **Source-side encryption:** Secure backup data and network transfers with source-side encryption and without negative impact on backup processing.
- **Windows Server 2016 support:** Get full support for Microsoft Windows Server 2016.

Easy-to-use recovery

If you ever need to get your data back, Veeam Agent for Microsoft Windows FREE offers several easy-to-use recovery options – all from the same image-level backup, including:

- **Bare-metal:** Restore your entire system to the same or different hardware
- **Volume-level:** Restore a failed hard drive or partition
- **File-level:** Restore individual files in minutes!
- **And more!**

Integration with Veeam Backup & Replication

Veeam Agent for Microsoft Windows FREE integrates with Veeam Backup & Replication in your VMware vSphere or Microsoft Hyper-V virtual environment, allowing you to take full advantage of Veeam backup repositories as target locations for your Windows backup jobs while working within Veeam Backup & Replication. You'll also be able to:

- Restore guest files and application items from endpoint backup files with Veeam Explorers™ for Microsoft Active Directory, Exchange, SharePoint and SQL Server
- Export physical disk contents from backup into VMDK/VHD/VHDX virtual disk files
- Get basic monitoring and management for all incoming backups, including email notifications about backup status
- Get endpoint backups off site to disk, tape or even the cloud with backup copy and backup to tape jobs
- Encrypt endpoint backups stored in Veeam backup repositories
- Assign end-user permissions to individual Veeam backup repositories
- Apply traffic throttling settings to Veeam Agent for Microsoft Windows FREE backup jobs

Bootable recovery media

If the OS installed on the computer fails to start for some reason, you can boot the OS from the recovery image. Veeam Agent for Microsoft Windows FREE lets you create a bootable recovery image of your computer on different kinds of media, including removable storage devices (e.g., USB flash drives, SD cards, etc.), CD/DVD/BD media and ISO image.

Built-in administration and diagnostic tools

Veeam Agent for Microsoft Windows FREE includes both proprietary and Microsoft Windows diagnostic tools to help you troubleshoot issues and accomplish advanced administration tasks, including:

- **Reset password:** Reset the password for the built-in administrator account
- **Startup repair:** Fix system problems that might prevent Windows from starting (e.g., missing or damaged system files, corrupted boot sector, etc.)
- **Memory diagnostics:** Check the system memory of your computer and detect potential problems after the next system reboot
- **Command prompt:** Start the Windows command prompt
- **And more!**

Availability for ALL workloads

Veeam Agent for Microsoft Windows¹ is also available in Workstation and Server licenses, which work with Veeam Availability Suite™² to deliver Availability for **ALL** workloads – virtual, physical and cloud – from a single management console, extending Veeam's leadership position from being the best for VMware vSphere and Microsoft Hyper-V to #1 Availability for any app, any data on any cloud.

¹ Requires Veeam Agent for Microsoft Windows 2.1 or later

² Requires Veeam Availability Suite 9.5 Update 3 or later

System requirements

CPU: x86-64 processor

Memory: 2 GB RAM

Disk Space: 150 MB for product installation

Network: 1 Mbps or faster

System firmware: BIOS or UEFI

Drive encryption: Microsoft BitLocker (optional)

OS: Both 64-bit and 32-bit versions of Microsoft Windows client and server operating systems are supported. For a complete list, please refer to the [User Guide](#).

Software: The following required thirdparty software is included in the setup program and is installed automatically when installing the product:

- Microsoft .NET Framework 4.5.2
- Microsoft SQL Server 2012 Management Objects
- Microsoft SQL Server System CLR Types

If you plan to use Veeam Agent for Microsoft Windows with Veeam Backup & Replication, you must install Veeam Backup & Replication 9.5 Update 2 or later on the Veeam backup server.

Microsoft SQL Database:

Microsoft SQL Server 2012 Express LocalDB Edition (installed with the product).
